RISHIK THAMMISETTY

Vijayawada, India, 521185 | rishik25t4@gmail.com | linkedin.com/in/rishii25t4 | github.com/rishii-25

SUMMARY

Second-year EEE undergraduate at the National Institute of Technology Andhra Pradesh with a solid grounding in circuits and semiconductor systems, concentrating on Machine Learning and its implementation in VLSI design. Currently pursuing research in image inpainting as a Research Intern at IIT Bhilai.

EDUCATION

National Institute of Technology Andhra Pradesh — Aug 2024 – Present
B.Tech. in Electrical and Electronics Engineering | CGPA: 8.4/10 (Up to this Sem) — *Tadepalligudem, India*

National Institute of Technology Andhra Pradesh — Aug 2025 – Present
Minor Degree in AI and Robotics

PROFESSIONAL EXPERIENCE

Indian Institute of Technology (IIT) Bhilai — May 2026 – Present
Research Intern

- Working as a research intern on image inpainting, focusing on developing improved deep learning-based models for realistic image reconstruction.
- Exploring convolutional and attention-based architectures to enhance inpainting quality on corrupted or masked image regions.

National Institute of Technology Andhra Pradesh — Apr 2025 – Present
Volunteer Assistant – E-Yantra Club

- Coordinated technical events and supported hands-on training sessions.
- Developed leadership, teamwork, and problem-solving skills through collaborative club activities.

TECHNICAL SKILLS

Programming Languages: C, Python, Matlab, Verilog
Technical Skills: ML, Deep Learning, Image Processing, Python Libraries, Web Development
Hardware & Embedded: VLSI Design, IoT (ESP32), Embedded Systems

ACADEMIC PROJECTS

Image Inpainting – IIT Bhilai Research Project — May 2026 – Present

- Developing a deep learning-based image inpainting system in association with IIT Bhilai to reconstruct missing or corrupted image regions with high visual fidelity.

EV Battery Health Prediction — Jan 2026 – April 2026

- Developed an integrated ML-based system to predict State of Health (SoH) using SoC, RUL, and anomaly detection as supporting features.

Smart Solar Street Light System — Feb 2026 – April 2026

- Designed an IoT-based adaptive lighting system using ESP32 with traffic-based brightness control and energy monitoring and optimization.

Smart Mattress Warmer (Embedded Control System) — Sep 2025 – Nov 2025

- Developed a safe smart mattress warmer for MRI and healthcare use with controlled heating and electrical protection.
