SUMMARY

Pre-final year Electrical and Electronics Engineering undergraduate at NIT Andhra Pradesh with interests in Machine Learning, VLSI, and Electronic Design Automation. Currently working as a Research Intern at IIT Bhilai on deep learning for image inpainting while developing physics-informed AI solutions for semiconductor applications.

EDUCATION

National Institute of Technology Andhra Pradesh B.Tech. in Electrical and Electronics Engineering; CGPA: 8.35/10 (Current) Minor Degree in AI and Robotics	Tadepalligudem, India <i>Aug 2025 – Present</i> <i>Aug 2025 – Present</i>
---	---

TECHNICAL SKILLS

Languages: C, Python, MATLAB, Verilog
ML Frameworks & Tools: PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib, OpenCV, SHAP
Core Domains: Machine Learning, Deep Learning, Image Processing, VLSI Design, EDA
Other Tools: Power BI, Xilinx VIVADO, Web Development, ESP32, Embedded Systems

PROFESSIONAL EXPERIENCE

Indian Institute of Technology (IIT) Bhilai <i>Research Intern</i> - Designed and developed a novel deep learning architecture for image inpainting to reconstruct missing and corrupted image regions with high visual fidelity. - Investigated advanced convolutional and attention-based mechanisms to improve reconstruction quality, robustness, and computational efficiency. - Conducted experimental evaluations using standard computer vision metrics, while exploring FPGA-based implementations to enable efficient hardware acceleration for real-time applications.	May 2026 – Present
National Institute of Technology Andhra Pradesh <i>Volunteer – E-Yantra Club</i> - Coordinated technical events and supported hands-on training sessions. - Developed leadership, teamwork, and problem-solving skills through collaborative club activities.	Apr 2025 – Present

ACADEMIC PROJECTS

Deep Learning for Realistic Image Inpainting Github - Designed and developed a novel deep learning architecture for image inpainting to reconstruct missing or corrupted image regions with high visual fidelity, utilizing convolutional and attention-based mechanisms. - Conducted comprehensive experimental evaluations using standard computer vision metrics, optimizing the architecture for computational efficiency and real-time hardware acceleration via FPGA implementations.	May 2026 – Present
Machine Learning-Assisted Static Timing Analysis (ML-STA) Github - Developing an ML-assisted Static Timing Analysis framework to predict critical path delays, identify timing bottlenecks, and detect violations in digital circuits to accelerate design closure. - Designing an end-to-end circuit analysis pipeline to extract high-dimensional timing features from gate-level netlists and timing graphs, reducing overall analysis complexity within EDA workflows.	May 2026 – Present
Physics-Informed ML for CMOS Gate Delay Prediction Github - Developed a physics-informed deep learning framework for 45nm CMOS gate delay prediction by embedding fundamental semiconductor physics principles directly into PyTorch-based neural networks. - Performed explainability analysis using SHAP to verify physically meaningful decision-making, ensuring the model accurately prioritizes critical device and operating parameters to enhance interpretability.	Jan 2026 – Present
EV Battery Health Prediction Github - Developed an integrated ML-based system to predict State of Health (SoH) using State of Charge (SoC), Remaining Useful Life (RUL), and automated anomaly detection as supporting features. - Applied robust data preprocessing, feature engineering, and regression algorithms to improve battery degradation prediction accuracy under dynamically varying operating conditions.	Jan 2026 – Apr 2026
